

NATIONAL UNIVERSITY OF MODERN LANGUAGES

VISUAL PROGRAMMING LAB REPORT - 1

NAME: Abdul Rafay (FI23791)

Ali Atif (FL23824)

Nazish Khan (FI23843)

Zohaib Ijaz (FL23811)

PROGRAM: BSSE (6th Semester)

COURSE: Visual Programming

SUBMITTED TO: Sir M Irtaza

DATE: 22 February 2026

DAY: Sunday

Design and Implementation of a Ticket Booking System Using Windows Forms (.NET Framework)

1. Objective

The objective of this lab is to design and develop a desktop-based Ticket Booking System using Windows Forms in C#. The system allows users to:

- Sign up with their details
- Select travel cities and date
- Confirm ticket booking
- Display booking details on final screen

2. Introduction

This project is a Windows Forms desktop application developed using C# and .NET Framework. The system simulates a basic ticket booking process. It consists of three forms:

- Signup Form
- Booking Form
- Confirmation Form

The application demonstrates form navigation, data passing between forms, input validation, and basic GUI design.

3. Software & Tools Used

- Microsoft Visual Studio
- C# Programming Language
- .NET Framework
- Windows Forms

4. Form Details

Form1 – Signup Form

Purpose:

Collect user information (Name, Email, Password).

Controls Used:

- Labels
- TextBoxes
- Button (Signup)

Code – Form1

```
using System;

using System.Collections.Generic;

using System.ComponentModel;

using System.Data;

using System.Drawing;

using System.Linq;

using System.Text;

using System.Threading.Tasks;

using System.Windows.Forms;

namespace bookingapp
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }

        private void Form1_Load(object sender, EventArgs e)
        {
        }

        private void signupBtn_Click(object sender, EventArgs e)
```

```

{
    string name = nameInput.Text;
    string email = emailInput.Text;
    string password = passwordInput.Text;

    if(name == "" || email == "" || password == "")
    {
        MessageBox.Show("invalid inputs");
    }else
    {
        Form2 bookingform = new Form2(name);
        this.Hide();
        bookingform.ShowDialog();
    }
}
}
}
}

```

Form2 – Booking Form

Purpose:

Allow user to select:

- Departure city
- Destination city
- Travel date

Controls Used:

- Labels

Form2

Not Signed Up

From

To

Travel Date

Book

- ComboBoxes

Code – Form2

```
using System;

using System.Collections.Generic;

using System.ComponentModel;

using System.Data;

using System.Drawing;

using System.Linq;

using System.Text;

using System.Threading.Tasks;

using System.Windows.Forms;

namespace bookingapp
{
    public partial class Form2 : Form
    {
        private string name;

        public Form2(string name)
        {
            InitializeComponent();

            this.name = name;
        }

        private void Form2_Load(object sender, EventArgs e)
        {

            label1.Text = "Welcome " + name;

            cmbFrom.Items.Add("Karachi");

            cmbFrom.Items.Add("Lahore");

            cmbFrom.Items.Add("Islamabad");

            cmbTo.Items.Add("Karachi");

            cmbTo.Items.Add("Lahore");

            cmbTo.Items.Add("Islamabad");
        }
    }
}
```

```

private void btnBook_Click(object sender, EventArgs e)
{
    string from = cmbFrom.Text;
    string to = cmbTo.Text;
    string date = datePicker.Value.ToShortDateString();

    if (from == "" || to == "")
    {
        MessageBox.Show("Please select cities");
        return;
    }

    if (from == to)
    {
        MessageBox.Show("From and To cannot be same");
        return;
    }

    Form3 confirm = new Form3(name, from, to, date);
    this.Hide();
    confirm.ShowDialog();
}

private void cmbTo_SelectedIndexChanged(object sender, EventArgs e)
{
}
}

```

Form3 – Confirmation Form

Purpose:

Display booking confirmation and ticket details.

Controls Used:

- **Label (for displaying booking details)**

Code – Form3

```
using System;

using System.Collections.Generic;

using System.ComponentModel;

using System.Data;

using System.Drawing;

using System.Linq;

using System.Text;

using System.Threading.Tasks;

using System.Windows.Forms;

using System.Xml.Linq;

namespace bookingapp
{
    public partial class Form3 : Form
    {
        public Form3(string name, string from, string to, string date)
        {
            InitializeComponent();

            lbDetails.Text =

                "Booking Confirmed\n\n" +

                "Name: " + name + "\n" +

                "From: " + from + "\n" +

                "To: " + to + "\n" +

                "Date: " + date;
        }
    }
}
```

```

    }

    private void Form3_Load(object sender, EventArgs e)
    {

    }

}

```
